FINISHES

Water Based Finishes: In 2007 Lanz Cabinets switched from conventional solvent based UV finishes to water based UV finishes. Presently, Lanz is using AkzoNobel water-based Low HAP UV Top Coat Mid-Sheen finishes with only traces of VOC's. This switch means that the majority of the finish used is water based, thus drastically reducing the amount of solvent used here at Lanz Cabinets. For cabinets processed through our hand finish line we use Sherwin-Williams® SHERWOOD® conversion varnish. This finish has no measurable level of formaldehyde or Hazardous Air Pollutants (HAP's), and extremely low levels of Volatile Organic Compounds (VOC's).

LANZ CABINETS

We use only quality hardwoods and hardwood veneers. We strive to provide a finish as consistent as these natural woods and wood veneers allow. Like all natural products, wood exhibits a great deal of variation; therefore, the appearance of the finished product may vary due to these variations in grain and other natural hardwood features. These differences may be more noticeable when in a raw state or finished with a natural finish. Hardwoods are also photo-reactive materials, which are affected by ultraviolet rays, so perfect color matches cannot be guaranteed when additional items are ordered subsequent to the original order. These natural wood characteristics are beyond our control, and for that reason, product variation due to wood color, grain, and other natural differences is not the responsibility of Lanz Cabinets.

LANZ CABINETS ENVIRONMENTAL STATEMENT

Lanz Cabinets believes that we are only guests on this earth and therefore are committed to conducting business in a fashion that safeguards the earth, our employees, customers, and neighbors from environment hazards. We do this by educating ourselves and working with our suppliers to identify and use sustainable and environmentally friendly products. We use the latest technology to reduce waste of materials, conserve energy, and limit both hazardous and non-hazardous emissions. We encourage recycling and the use of recycled products. We are and have been committed to continuous improvement of our processes and systems so we can reduce the impact that we make on this earth.

Lanz Cabinets has been pursuing being an environmentally friendly company long before it was vogue. In order to make being environmentally friendly the norm rather than the exception we have included Environmental Management in our Quality Manual. Additionally, one of our Core Values is "We will be sensitive to the environment by promoting the use of renewable resources, recyclable products and sustainable practices."

Because of our sensitivity and dedication to the environment, our management, engineering, and purchasing teams are constantly researching leading edge technologies for ways that lessen the impact of our hazardous and non-hazardous waste streams. Where we do have waste we look for ways to recycle or reuse and if the waste ends up needing to be disposed of, we find the way that has the least impact on our earth.

FROM THE OUTSIDE IN

Lanz machine applies finishes for consistency and efficiency. Our state-of-the-art equipment uses an environmentally friendly process; recycling unused material and reducing waste.

We choose stains and finishes that protect your cabinets and enrich the grain and color of the wood, and we build our commitment to superior quality and durability with the best selection of wood.

We've attempted to reproduce our stain colors as closely as possible. However, slight discrepancies may occur due to printing limitations and variations in wood grain and pattern.
