Base shoe and scribe molding options presented here are subject to change due to availability. Lantz Cabinets makes no guarantee that these materials will continue to be in production. If a material is discontinued, we will make every effort to find a suitable replacement.

Lanz uses solid hardwood scribe molding in face frame cabinetry for the transition from finished end of the cabinet or filler to the wall. The finish is stained to match the frame of the cabinets. Any gaps due to irregularities in the wall will be covered by the scribe molding.

Our optional Base shoe masks any gaps where the cabinet meets the floor. This flexible solid wood molding creates a nice transition from cabinet toe skins to where it meets the flooring.

If your project is supply only, the finished scribe and base shoe is provided uncut.
